

# AURORA UEM

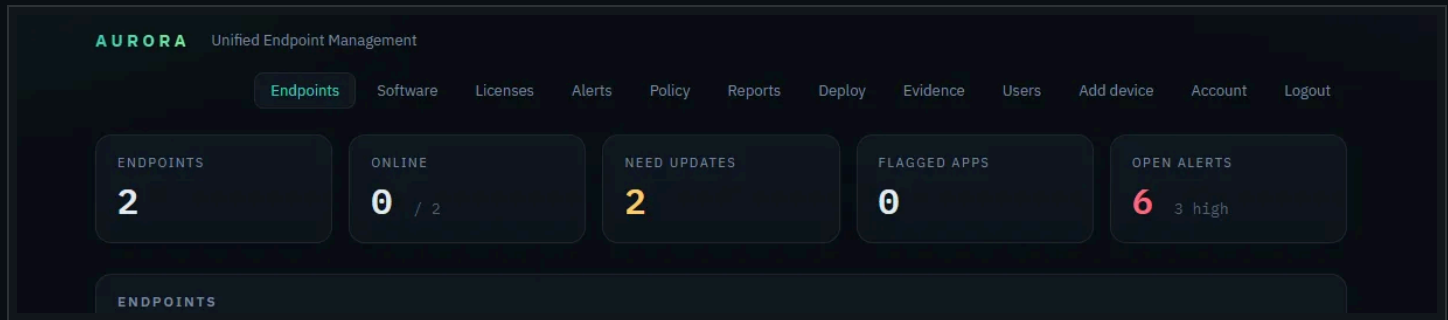

Your whole fleet. *One screen.* On the record.

Windows, macOS, and Linux endpoints managed from a single self-hosted console — one lightweight agent per device, cryptographically signed tasks, and an append-only, SHA-256-hashed audit log recording every privileged action as examiner-grade evidence.

SELF-HOSTED

WINDOWS · MACOS · LINUX

ONE AGENT, EVERY PLATFORM

The console — every endpoint, its patch state, and its alerts across a mixed fleet.

## One cross-platform agent

A single lightweight agent enrolls Windows, macOS, and Linux — no per-OS sprawl.

## Inventory, automatically

Hardware specs and installed software collected across the whole fleet.

## Patch-status scanning

Missing updates surface per machine — before an examiner surfaces them for you.

## Policy & license compliance

Blocklisted apps flagged; installs compared against seats you actually own.

## Append-only audit log

Operator, machine, timestamp, and SHA-256 payload hash on every privileged action.

## One-paste deployment

OS-specific one-liners download, enroll, and schedule the agent automatically.

## IT & SYSADMINS

Mixed fleets from one console instead of three.

## REGULATED ORGANIZATIONS

Built in the context of FDIC examination — records an examiner can trust.

## SUITE REFUGEES

The endpoint management you use, without the license weight you don't.

Put your fleet on one screen — request a demo.
