

# AURORA UEM

## AUDIT-READY ENDPOINT MANAGEMENT FOR *WINDOWS, MAC & LINUX.*

Aurora UEM manages Windows, macOS, and Linux endpoints from a single self-hosted console. One lightweight agent enrolls each device, reports hardware, software, and patch inventory, and executes cryptographically signed tasks – while an append-only, SHA-256-hashed audit log records every privileged action as examiner-grade evidence.

- SELF-HOSTED
- WINDOWS, MACOS & LINUX
- ONE AGENT, EVERY PLATFORM

### KEY FEATURES

<p><b>ONE AGENT, EVERY PLATFORM</b></p> <p>A single lightweight agent enrolls and manages Windows, macOS, and Linux from the same server – no per-OS agent sprawl.</p>	<p><b>HARDWARE &amp; SOFTWARE INVENTORY</b></p> <p>Per-device specs and installed-software lists, collected automatically across the whole fleet.</p>
<p><b>PATCH-STATUS SCANNING</b></p> <p>Each OS is read for missing updates, and patch gaps surface per machine – before an examiner surfaces them for you.</p>	<p><b>POLICY &amp; LICENSE COMPLIANCE</b></p> <p>Blocklisted applications get flagged, and installs are compared against the license seats you actually own.</p>
<p><b>AN AUDIT LOG THAT CAN'T BE QUIETLY EDITED</b></p> <p>Every privileged action logged with operator, machine, timestamp, and a SHA-256 payload hash – append-only, examiner-grade evidence.</p>	<p><b>ONE-PASTE DEPLOYMENT</b></p> <p>OS-specific installer one-liners download, enroll, and schedule the agent automatically.</p>

### WHO WE SERVE

<p><b>IT &amp; SYSTEMS ADMINISTRATORS</b></p> <p>Mixed Windows, macOS, and Linux fleets from one console instead of three.</p>	<p><b>REGULATED &amp; EXAMINED ORGANIZATIONS</b></p> <p>Built in the context of FDIC examination – defensible records for your examiner.</p>	<p><b>TEAMS REPLACING HEAVYWEIGHT SUITES</b></p> <p>The endpoint management you actually use, without the license weight.</p>
