

Compliance Continuous

Compliance as a posture, not a scramble.

AVAILABLE NOW · WINDOWS, MAC & LINUX · SELF-HOSTED

Compliance Continuous pairs Aurora UEM's live endpoint visibility with structured controls tracking, so your compliance posture is something you have — not something you assemble the month before an exam. Inventory, patch status, and license compliance stream in from the fleet continuously; controls are mapped, owned, and tracked; and the evidence writes itself to an append-only record as the work happens. Self-hosted, on your hardware, under your rules.

WHAT IT DOES

Live endpoint inventory

Every machine in the fleet reporting hardware, software, and configuration continuously — powered by Aurora UEM, the fleet console you already own.

Patch posture in real time

Which machines are current, which are behind, and for how long — the question every assessment asks, answered before it's asked.

License compliance tracked

Installed software reconciled against entitlements, continuously — the audit finding that never gets the chance to become one.

Controls mapped and owned

Your control set laid out with owners, status, and review dates — assessment tracking that lives in a system instead of a spreadsheet with one author.

Evidence that writes itself

Fleet data and control activity land in an append-only record as they happen — exam prep becomes an export, not a quarter.

Self-hosted, owner-ruled

Your fleet, your data, your security posture — set by the owner, not dictated by a cloud vendor's convenience.

WHY COMPLIANCE CONTINUOUS

Point-in-time is a snapshot of luck

An annual assessment tells you what was true the week everyone prepared for it. Continuous posture tells you what's true today.

Evidence beats assertion

The difference between 'we patch promptly' and a timestamped record of every machine's patch history is the difference between an assertion and an answer.

Built on owned ground

No compliance data leaves your building to sit in someone else's multi-tenant cloud. The posture is yours; the evidence stays that way too.

WHO IT'S FOR

COMMUNITY BANKS

Standing exam readiness for institutions where the IT team and the compliance team share a hallway — or a person.

MSPS & IT TEAMS

Deliver continuous compliance posture as a service across client fleets you already manage.

COMPLIANCE OFFICERS

A live answer to 'where do we stand' — without waiting on a data pull from IT.

Be ready before they ask.

Request a demo and see a fleet's compliance posture — inventory, patches, licenses, controls — live on one screen.
