

DATASHIFT

LEGACY CSVS IN. *EXAMINER-READY* DATA OUT.

An air-gapped desktop application that transforms legacy bank core exports into examiner-ready output – with every action recorded to an append-only, SHA-256 hash-chained audit log an examiner can verify independently. No cloud. No network code. No AI.

WINDOWS & LINUX · GUI + CLI

GPG-SIGNED RELEASES

11 FACTORY SCHEMAS: CSI · FIS-BANKWAY · IBT · FED ACH

KEY FEATURES

SCHEMA-DRIVEN TRANSFORMATION

Versioned plain-JSON schemas map any source column to examiner target fields.

TAMPER-EVIDENT AUDIT TRAIL

Every row, transform, error, and job hash-chained in open SQLite – alterations break the chain.

FULLY AIR-GAPPED

No sockets, no telemetry, no update checks compiled in. Data never leaves the host.

DETERMINISTIC, NO-AI

Identical input and schema always produce bit-identical output – re-run history exactly.

VALIDATION & RECONCILIATION

Field rules by severity plus two-file reconciliation, exact and fuzzy.

PROVENANCE & SCHEDULING

GPG-signed binaries; recurring jobs via Task Scheduler, cron, or systemd.

WHO WE SERVE

COMMUNITY BANKS

Digitize legacy core data without shipping it anywhere.

COMPLIANCE & CISOS

Demonstrable lineage in the language examiners speak.

BANK IT

One binary that installs on hardware you control.
